**Key passages****A CLINICAL TRIAL OF SANOCRY SIN IN PULMONARY  
TUBERCULOSIS<sup>1</sup>**

J. BURNS AMBERSON, JR., B. T. McMAHON AND MAX PINNER

Obviously, the matching could not be precise, but it was as close as possible, each patient having previously been studied independently by two of us. Then, by a flip of the coin, one group became identified as group I (sanocrysin-treated) and the other as group II (control). The members of the separate groups were known only to the nurse in charge of the ward and to two of us. The patients themselves were not aware of any distinction in the treatment administered.
