Principles and Problems in Establishing the Efficacy of Psychotropic Agents
Public Health Service Publication No 2138
Washington DC: National Institute of Mental Health

Aims

Clinicians, investigators, industry, regulatory agencies, and the general public all are interested in safe and effective medications for the treatment of mental illness. All have a role to play in the development and proper utilization of these medications. Because these roles are overlapping and interrelated (but not identical, and because multiple pressures influence the roles played, it is not surprising that what constitutes “proof of efficacy” and how evidence of efficacy should be accumulated differs among those concerned with drug development. Unfortunately, clinical evaluation is not an exact science; there are no absolute answers, formulas, or clear procedures which can be routinely applied and be expected to give definitive answers with regard to efficacy or safety. This volume, as its title states, seeks explicitly to express the principles and problems involved in establishing the efficacy of psychotropic agents, circa 1970 (Preface, page 1).

Contents (xiii+392 pages)

[Sub-sub-headings omitted]

Preface (Jerome Levine, Burtrum C Schiele, Lorraine Bouthilet)

Committee and Contributors

Acknowledgements

Section One: Overview

Rationality in the assessment of psychotropic drug efficacy (Joseph D Cooper)

Protection and innovation

A philosophy of control

New mechanisms of regulatory decision making

Total systems approach to drug assessment

Decision processes in establishing the efficacy and safety of psychotropic agents

(Louis Lasagna)

Selection of a compound for clinical trial

Early human trials

Early therapeutic trials

Formal controlled trials

Additional premarketing experience

Postmarketing surveillance

Economics of pharmaceutical innovation

Informed consent

The placebo and double-blind controls

Sponsorless drugs and drugs of limited applicability

Section Two: Methodology

Introduction (C James Klett, Jonathan O Cole)

Evaluation of efficacy of psychotropic agents in schizophrenic populations (Donald

M Gallant, Melvin P Bishop, Spencer M Free Jr, Solomon C Goldberg, George

M Simpson)

Chronic schizophrenia

- Acute schizophrenia
- Outpatient schizophrenia
- Methodology for drug evaluation in affective disorders: depression (Gerald L Klerman)
 - The clinical phenomena
 - Preclinical studies
 - Preliminary trials in human beings
 - Early clinical trials
 - Controlled clinical trials
 - Postmarketing studies
 - Large-scale studies using pooled data or collaborative designs
 - Prophylactic or maintenance studies
- Methodology for drug evaluation in affective disorders: mania (Samuel Gershon)
 - Problems in evaluation in mania
 - Early trials
 - Controlled studies
 - Prophylactic studies
 - Conclusion
- Methodological issues in evaluating the effectiveness of agents for treating anxious patients (EH Uhlenhuth, Ronald S Lipman, JB Chassin, LR Hines, Douglas M McNair)
 - Patient characteristics
 - Setting
 - Criteria of effectiveness
 - Design
 - Drug as a variable
 - Statistical methods
- Methods for evaluating drug efficacy in geriatric psychiatric disorders (Jonathan O Cole)
 - Special problems
 - Patient characteristics
 - Conditions to be treated
 - Criterion measures
 - Summary
- Psychopharmacology in children: problem areas, methodological considerations, and assessment techniques (Alberto DiMascio)
 - Classification of symptomatology and diagnosis
 - Severity of illness
 - Age (maturation)
 - Other organismic variables
 - Dosage
 - Assessment techniques and problems
 - Adverse drug actions
 - Aims, requirements, and value of early trials, large-scale double-blind studies, and late-stage studies
- Approaches to measuring the efficacy of drug treatment of personality disorders: an

analysis and program (Donald F Klein)

Syndromal issues

The personality disorders

Possible penal settings for drug investigation

Measurement issues

Suggestions for drug studies in alcoholism (Samuel C Kaim)

Acute intoxications

Nutritional deficiencies

Somatic complications

Withdrawal states

Chronic alcoholism

Methods for evaluating drug efficacy in the treatment of drug-dependent states

(Roger Meyer)

Withdrawal states

Drug intoxication

Chronic drug-seeking behavior

Mental conditions associated with hallucinogenic agents

The design of clinical trials (J Richard Wittenborn)

Nature of the variables

Plan of investigation

The sample

Analytical requirements

Conclusion

Section Three: Documentation and interpretation

Introduction (Karl Rickels)

Documentation of clinical trials (Eugene Laska, Karl Rickels, Victor B Slotnick,

George W Logemann)

Phases of drug evaluation and relevant data to be documented

Data collection

Data validation mechanisms

Storing information

Information retrieval

Information display

General comments

BLIPS: an information processing system for clinical drug evaluation (William

Guy, Roland R Bonato, Patricia Cleary, Kenneth Yang)

Origin of the system

Establishment of the data bank

Design of BLIPS

Data-processing phase

Statistical procedures

Standard data analysis package

Narrative summary

Storage and retrieval

Data bank

List of programs

Interpretation of data from investigations assessing the effectiveness of psychotropic agents (Robert W Downing, Karl Rickels, J Richard Wittenborn, Nils B Mattsson)

Practical and statistical significance

Sample size and statistical power

Combination of data across studies

Multiple improvement measures and the use of multivariate statistics

Miscellaneous issues

General comments

Appendix 1: Tables and Figures

Figure 1: Planned research, distribution, and utilization of assessment forms

Figure 2: Major elements in BLIPS

Figure 3: Coding and editing

Figure 4: Processing and analyses

Figure 5: Assembly of standard package and storage of data

Table 1: BPRS error listing

Table 2: BPRS raw scores

Table 3: Cross-tabulation of ratings on two BPRS symptoms

Figure 6: Cross-tabulations in schematic form

Table 4: Summary of pre- to post-drug changes on the BPRS

Table 5: Treatment of emergent symptoms by subject and period

Table 6: Treatment emergent symptom cluster analysis (adverse behavioral effects)

Figure 7: Symptom matrix

Figure 8: Modular concept as utilized in construction of narrative summary

Figure 9: Organization of data bank

Figure 10: Retrieval procedure

Appendix 2: Mathematical formulae

Epilogue

Authors

The editors are Jerome Levine MD (Chief, Psychopharmacology Research Branch, National Institute of Mental Health, Chevy Chase, MA); Burtrum C Schiele MD (Professor of Psychiatry, University of Minnesota Hospitals, Minneapolis, Minnesota); and, Lorraine Bouthilet PhD (Scientific Director, National Clearinghouse for Mental Health Information, National Institute of Mental Health, Chevy Chase, MA). The contributors are Melvin P Bishop PhD (Associate Professor of Psychiatry (Psychology), Tulane University School of Medicine, New Orleans, Louisiana); Roland R Bonato PhD (Director, Biometric Laboratory, George Washington University, Washington, DC); JB Chassan PhD (Psychiatric Research Planner, Hoffmann-LaRoche Inc, Nutley, New Jersey); Patricia Cleary MS (Research Associate, Biometric Laboratory, George Washington University, Washington, DC); Jonathan O Cole MD (Superintendent, Boston State Hospital, Boston, MA); Joseph D Cooper PhD (Professor of Political Science, Harvard University, Washington, DC); Alberto DiMascio PhD (Director of Psychopharmacology, Commonwealth of Massachusetts, Department of Mental Health, Boston, MA); Robert W Downing PhD (Associate Professor of Psychology in Psychiatry, Department of Psychiatry, University of Pennsylvania Hospitals, Philadelphia, PA); Spencer M Free Jr PhD

(Director, Biostatistics, Research and Development Division, Smith, Kline and French Laboratories, Philadelphia, PA); Donald M Gallant MD (Professor of Psychiatry and Neurology, Tulane University School of Medicine, New Orleans, Louisiana); Samuel Gershon MD (Professor of Psychiatry and Neurology, New York University Medical Center, New York, NY); Solomon C Goldberg PhD (Assistant Chief, Psychopharmacology Research Branch, National Institute of Mental Health, Chevy Chase, MA); William Guy PhD (Early Clinical Drug Evaluation Unit, Coordinator for Data Analyses, Biometric Laboratory, George Washington University, Washington, DC); LR Hines PhD (Director of Biological Research, Hoffmann-LaRoche Inc, Nutley, NJ); Samuel C Kaim MD (Director, Staff for Alcoholism and Related Disorders, Department of Medicine and Surgery, Veterans Administration, Washington, DC); Donald F Klein MD (Director of Research, Hillside Hospital, Glen Oaks, New York); Gerald L Klerman MD (Professor of Psychiatry, Harvard University Medical School, Boston, MA); C James Klett PhD (Chief, Central NP Research Laboratory, Veterans Administration Hospital, Perry Point, MA); Louis Lasagna MD (Professor of Pharmacology and Toxicology, University of Rochester School of Medicine and Dentistry, Rochester, NY); Eugene Laska PhD (Director of Information Sciences Division, Rockland State Hospital, Orangeburg, New York); Ronald S Lipman PhD (Chief, Clinical Studies Section, Psychopharmacology Research Branch, National Institute of Mental Health, Chevy Chase, MA); George W Logemann PhD (Associate Director, Division of Information Sciences, Rockland State Hospital, Orangeburg, New York); Nils B Mattsson LLD (Chief, Scientific Applications Section, Computer Systems Branch, National Institute of Mental Health, Chevy Chase, MA); Douglas M McNair PhD (Associate Professor of Psychiatry, Division of Psychiatry, Boston University of Medicine, Boston, MA); Roger Meyer MD (Assistant Professor of Psychiatry, Division of Psychiatry, Boston University School of Medicine, Boston, MA); Karl Rickels MD (Professor of Psychiatry, Department of Psychiatry, University of Pennsylvania Hospitals, Philadelphia, PA); George M Simpson MD (Supervising Psychiatrist, Research Facility, Rockland State Hospital, Orangeburg, New York); Victor B Slotnick MD (Associate Director, Clinical Investigation, McNeil Laboratories, Fort Washington, PA); UH Uhlenhuth MD (Associate Professor of Psychiatry, Division of Biological Sciences, University of Chicago, Chicago, Illinois); J Richard Wittenborn PhD (University Professor of Psychology and Education, and Director, Interdisciplinary Research Center, Rutgers State University, New Brunswick, NJ); and Kenneth Yang BA (Senior Staff Scientist, Biometric Laboratory, George Washington University, Washington, DC).
