

(44) JB Chassan (1979)
Research Design in Clinical Psychology and Psychiatry
Second Edition, Revised and enlarged
New York: John Wiley & Sons Inc

Preamble

For the first edition of this book see no. (14) above.

Aims

The material added in this edition is essentially in the areas of statistical methods and techniques, documentation, and the design of intensive studies. With its enlarged scope the volume can now be used in its entirety in a well-rounded full year's course in the design of clinical research. It also allows for a wide choice of emphasis among topics in accordance with the needs of a particular curriculum or research training program (Preface, pages vii and viii).

Contents (xxii+492 pages)

Preface to the second edition (JB Chassan)

Foreword (Leopold Bellak)

Preface (JB Chassan)

1. Logical, epistemological, and statistical preliminaries
 - 1.1 Introduction
 - 1.2 Logic and experience
 - 1.3 Some aspects of logical reasoning and some logical fallacies
 - 1.10 A little more logic
 - 1.11 The problem of generalization
 - 1.12 From universal statements to statements of probability and of statistical significance
2. Some elementary statistics
 - 2.1 Introduction
 - 2.2 Testing for a statistically significant difference between two statistically independent probability estimates, or percentages
 - 2.3 Testing for a significant difference between percentages when patients are paired
 - 2.4 Student's *t*-test in comparing means from two independent samples
 - 2.5 Student's *t*-test for paired observations
 - 2.6 Parametric versus nonparametric statistics
 - 2.7 The probability of detecting a true difference
 - 2.8 The range of possible true differences which can be consistent with the same set of data
 - 2.9 Significance levels adjusted for multiple comparisons
 - 2.10 Linear regression and the comparison of regressions, or the analysis of covariance
 - 2.11 Comparing variances and simple analysis of variance
 - 2.12 The coefficient of correlation
 - 2.13 Autocorrelation
 - 2.14 The two-by-two Markoff chain
3. Some aspects of control and randomization
 - 3.1 Introduction
 - 3.2 Historical and concurrent controls
 - 3.3 Randomization

4. The double-blind clinical trial
 - 4.1 The placebo and related effects
 - 4.2 Some aspects of the influence of investigator expectations and attitudes
 - 4.3 Proper coding procedures for the reduction of bias within the double-blind
 - 4.4 Some limitations of the double-blind
 - 4.5 The double-blind and the psychiatric ideal
 - 4.6 The double-blind and side effects
5. Experimental design and the extensive model
 - 5.1 Introduction
 - 5.2 The completely randomized clinical trial
 - 5.3 Selecting the number of treatments for a clinical trial
 - 5.4 Further considerations concerning the question of whether to include a placebo group
 - 5.5 Sequential design
 - 5.6 Crossover design
 - 5.7 Interpreting comparisons of efficacy after successive weeks of treatment
 - 5.8 Factorial design
 - 5.9 Statistical independence and the research setting
 - 5.10 Screening and the question of dosage
 - 5.11 Statistical handling of dropouts and patients with side effects
 - 5.12 An illustration of the use of end-point observations
 - 5.13 Relative efficiency in clinical trials
6. Some difficulties, pitfalls, and limitations of the extensive model
 - 6.1 Introduction
 - 6.2 The question of sample size
 - 6.3 The question of patient characteristics and the selection of patients
 - 6.4 Some further problems of inference from the data of an extensive design
 - 6.5 Sample and population: the question of operational significance
 - 6.6 Some further limitations
7. Intensive design
 - 7.1 Introduction
 - 7.2 Statistical aspects of symptom fluctuation within a given patient
 - 7.3 A brief statistical description of the psychopathology of a single case
 - 7.4 Logical statistical aspects of intensive design
 - 7.5 Applications to drug evaluation
 - 7.6 Some questions concerning the application of intensive design to drug evaluation
 - 7.7 Some limitations of the intensive model in drug evaluation
 - 7.8 An application to the study of interpersonal processes
 - 7.9 Application to the statistical study of psychoanalytic processes
8. The documentation of clinical research and related topics
 - 8.1 Introduction
 - 8.2 Reliability as dependability
 - 8.3 Reliability as a measure of precision, or consistency
 - 8.4 Errors of measurement and true variation
 - 8.5 The question of test-retest reliability in clinical evaluation
 - 8.6 Interobserver reliability and interpersonal processes
 - 8.7 The question of validity and definition in clinical observation
 - 8.8 Rating scales in clinical evaluation
 - 8.9 Factor analysis of rating scales
 - 8.10 Self-reporting scales for patients

- 8.11 The individualization of documentation
- 8.12 Documentation of intensive psychotherapy and psychoanalysis
- 9. Further aspects and applications of intensive design
 - 1.1 Introduction
 - 2.2 A first clinical trial of a new drug
 - 3.3 A single-case first trial and the question of replication
 - 4.4 An application to clinical pharmacology involving content analysis of small samples of speech
 - 5.5 An application to adjunctive drug therapy, with preselection of cases and variable dosages
 - 6.6 Intensive design for economy in clinical research
 - 7.7 An intensive design with lithium carbonate
 - 8.8 Systematic replication to test for drug personality interaction effect
 - 9.9 An application to diagnostic evaluation
 - 9.10 Applications to political research
 - 9.11 An application to the psychodynamics of depression and hostility
 - 9.12 An application to the study of the relationship between self-esteem and future outlook
 - 9.13 An application to the study of supervision in psychotherapy
 - 9.14 Applications to the study of interpersonal physiological processes
 - 9.15 An application to the study of hand movements during psychoanalysis
 - 9.16 An application to testing for differential drug effect on ego functioning during psychoanalysis
 - 9.17 An application to the psychosomatics of asthma
 - 9.18 Applications to the study of 17-hydroxycorticosteroid and its correlates
 - 9.19 A study of anxiety and hostility in the menstrual cycle
 - 9.20 An application to drug therapy for chronic hyperventilation
 - 9.21 Ethics and the single case study
- 10. Principles, tactics, and strategies of intensive design
 - 10.1 The principle of single-case generalization
 - 10.2 Replication and generalization
 - 10.3 The use of statistics in single-case studies
 - 10.4 Timing and the selection of subjects for intensive designs
 - 10.5 Treatment sequence in the single-case study
 - 10.6 Behavior therapy approaches to single-case design
 - 10.7 Statistical significance in sets of replicates taken as a whole

Appendix: Psychoanalytic Research Report Form
